

## Profile Details

The FR-MCG Series is a heavy-duty Stainless Steel Corner Guard system engineered for maximum protection of vulnerable 90-degree wall intersections against severe impact. Constructed from high-grade stainless steel, this robust profile delivers superior structural defense, excellent hygiene, and a premium aesthetic finish, making it suitable for the most demanding commercial and industrial environments.

### Application

The primary function is to shield protruding wall corners from the concentrated impact of heavy wheeled traffic and equipment. This protection is vital for minimizing damage, reducing long-term repair costs, and maintaining facility hygiene. Applications are ideally suited for critical-impact areas such as commercial kitchens, food processing plants, laboratories, loading zones, and high-traffic healthcare environments.

### Material & Finish

Construction utilizes High-Grade Stainless Steel, chosen specifically for its exceptional strength, rigidity, and inherent resistance to corrosion and chemical agents. The guard is typically a formed or fabricated single-piece profile. Standard finish is a hygienic Satin or Brushed surface. Installation involves secure mounting via fasteners or heavy-duty adhesive for permanent corner protection.

### Compatibility

The FR-MCG Series provides extreme resistance to impact and abrasion, safeguarding the underlying wall structure from catastrophic damage. The non-porous stainless steel surface ensures superior cleanability and chemical resistance, fully supporting stringent sanitization protocols. This system guarantees permanent, low-maintenance corner integrity in highly abusive environments.

## Profile Guide

Stainless Steel Corner Guard  
Indoor

Application	Width(mm)	Length(mm)	Height(mm)
Indoor	50	50	1000, 1200 & 1500
	75	75	1000, 1200 & 1500
